

How to run the '*Delete MBNProfile*' script on ex-Justice laptops

Summary: To install a new Telstra SIM card on the laptop, please run the "*delete MBN script*" to remove any past SIM configurations on the laptop.

Steps to run the '*Delete MBN*' script:

1. Please note, a SIM card (old or new SIM) must be present in the laptop before you run the below script.
2. On the laptop that you want to run the script, open **File Explorer** and browse to **C:**.
3. Open **Program files (x86)** folder
4. Open folder **MBN Profile**
5. Right click on "**delete-MBNProfile.ps1**" script and click on Run with PowerShell

6. A PowerShell window will appear and a "*Profile Deleted*" message will be displayed in the window. Close the PowerShell window once you see this message.
7. If you receive the below message, please ignore and exit. This means there was no existing configurations present.

Conclusion: By following the above steps, any existing configuration on the laptop will be removed, ready to take on a data SIM service.
